According to our (Global Info Research) latest study, the global Thyristor Dimming Power Supply market size was valued at US\$ 263 million in 2025 and is forecast to a readjusted size of US\$ 380 million by 2032 with a CAGR of 5.5% during review period.

The thyristor dimming power supply is a power supply device that adjusts the output voltage by controlling the conduction angle of the thyristor (SCR), thereby adjusting the brightness of the light source. It is mainly used for dimming traditional AC lamps such as incandescent lamps and halogen lamps. By changing the conduction time of the thyristor in the AC cycle, the amplitude of the current is adjusted to achieve the brightness adjustment of the lamp. Compared with other dimming methods (such as PWM dimming), the thyristor dimming power supply has the advantages of low cost, smooth dimming, and strong adaptability. It is widely used, especially in lighting equipment with high power requirements and little change in brightness.
