Abstracts

According to our (Global Info Research) latest study, the global Thyristor Surge Suppressor market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A Thyristor Surge Suppressor (TSS) prevents overvoltages or power surges from damaging power supplies. Designed to protect new high-voltage digital line cards as well as classical subscriber line interface cards (SLIC) against transient overvoltages, these components present a very low gate triggering current (IGT) in order to reduce the current consumption on printed circuit board during the firing phase. TSS brings many advantages over traditional Gas Discharge Tube (GDT) surge arrestors including stability over time (no ageing phenomenon) and turn-on without parasitic oscillation or ringing.
