Abstracts

The global Thyristor Transient Voltage Suppressors market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Thyristor-based transient voltage suppression (TVS) devices can be used to provide overvoltage protection that is nearly an open circuit under normal operating conditions. Applying a voltage above a certain value (known as the breakdown voltage) across these devices turns them into a conducting state that approximates a short circuit. This state continues until the current through the device drops below a minimum value called 'holding current' due to some external influence in the circuit.

This report studies the global Thyristor Transient Voltage Suppressors production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Thyristor Transient Voltage Suppressors, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
