Thyroid Function Health Test is a medical examination conducted to assess the functioning of the thyroid gland. This test measures the levels of certain hormones produced by the thyroid, such as thyroxine (T4) and triiodothyronine (T3), as well as thyroid-stimulating hormone (TSH) produced by the pituitary gland. The results of this test help healthcare providers determine if the thyroid is overactive (hyperthyroidism), underactive (hypothyroidism), or functioning normally. A thyroid function health test is crucial for diagnosing thyroid disorders, monitoring the effectiveness of thyroid treatment, and ensuring overall thyroid health. Abnormal thyroid function can lead to a range of symptoms, including weight changes, fatigue, mood swings, and heart problems, making regular thyroid function testing an important aspect of preventive healthcare.
