## Abstracts

Hormones released by thyroid gland play a crucial role in stimulating metabolism, growth, and calories processing. Globally, thyroid gland disorders such as hypothyroidism, hyperthyroidism, and thyroid nodules affect around 5% to 10% of the population. Hyperthyroidism and hypothyroidism affect majority of the population primarily due to growing incidence of autoimmune diseases such as Grave's disease and Hashimoto's thyroiditis. Moreover, iodine deficiency is a widespread problem across the globe and is measured as a prime risk factor for the increase in prevalence of thyroid disorders.

### SCOPE OF THE REPORT:

This report studies the Thyroid Gland Disorder Treatment market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Thyroid Gland Disorder Treatment market by product type and applications/end industries. The major factors that drive the growth of the market include increase in the incidence of thyroid gland disorder, rise in the number of disease awareness programs especially in the developing countries, and development of effective combination drug therapies to treat thyroid gland disorder. However, side effects of the drugs and stringent government regulations hamper the market growth. Moreover, availability of large pool of undiagnosed patients due to asymptomatic nature of thyroid disorders help open new avenues for the market growth during the forecast period. One of the primary drivers for the market growth is the escalating patient population with iodine deficiency. Iodine deficiency is predominant around the globe when compared with the large consumers of iodine and is particularly seen in pregnant women and

young children. Iodine is present in the body in minute amounts, mainly in the thyroid gland and has a significant role to play in the thyroid synthesis. It has been observed that over two billion individuals have insufficient iodine intake, among which South Asia and sub-Saharan Africa are majorly affected. The introduction of various remedies for the treatment of this deficiency will boost market growth in the coming years.

The global Thyroid Gland Disorder Treatment market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.
