## Abstracts

According to our (Global Info Research) latest study, the global THz Attenuators market size was valued at US\$ 116 million in 2024 and is forecast to a readjusted size of USD 153 million by 2031 with a CAGR of 3.7% during review period.

A terahertz attenuator is a device used to adjust the signal strength of electromagnetic waves in the terahertz band. The terahertz band refers to a region of the electromagnetic spectrum with a frequency range from 100 GHz to 10 THz and a corresponding wavelength range from 3 mm to 30 microns, which is between millimeter waves and infrared light. This frequency band has many unique characteristics compared to other bands such as microwaves and infrared rays, so it has great potential in many application fields. Terahertz attenuators achieve different attenuation ratios through different combinations of attenuation sheets. Common transmittances include 30%, 10%, 3%, 1%, 0.9%, 0.3%, 0.09%, 0.03%, 0.009%, 0.003% and 0.0009%, etc.
