According to our (Global Info Research) latest study, the global Tiamulin Fumarate Use in Animal market size was valued at USD 100.2 million in 2022 and is forecast to a readjusted size of USD 138.6 million by 2029 with a CAGR of 4.7% during review period.

Tiamulin hydrogen fumarate is a semisynthetic derivative of pleuromutilin. Tiamulin is active against gram-positive bacteria, mycoplasmas, and anaerobes, including Brachyspira hyodysenteriae. Tiamulin is well absorbed when administered PO. It is labeled for use as an oral medicated feed or water in swine in the US to treat swine dysentery and Actinobacillus pleuropneumoniae. In poultry, tiamulin interferes with monensin and salinomycin metabolism, and if the drugs are administered together, they become toxic. Generally, however, tiamulin has few adverse effects.

The Tiamulin Hydrogen Fumarate for Veterinary Market is driven by the increasing demand for effective antibiotics in animal healthcare to combat bacterial infections and improve livestock health. Tiamulin Hydrogen Fumarate is widely used to treat respiratory and enteric diseases in animals. However, a significant challenge in this market is the concern over antibiotic resistance and the need for responsible antibiotic usage. Regulatory restrictions and growing awareness about antibiotic stewardship pose challenges for manufacturers. Additionally, market competition and the cost of antibiotics in veterinary medicine require manufacturers to strike a balance between affordability and quality to ensure the continued availability and effectiveness of Tiamulin Hydrogen Fumarate for veterinary use.
