Abstracts

The global Tiamulin Hydrogen Fumarate for Veterinary market size is expected to reach \$ 138.6 million by 2029, rising at a market growth of 4.7% CAGR during the forecast period (2023-2029).

The Tiamulin Hydrogen Fumarate for Veterinary Market is driven by the increasing demand for effective antibiotics in animal healthcare to combat bacterial infections and improve livestock health. Tiamulin Hydrogen Fumarate is widely used to treat respiratory and enteric diseases in animals. However, a significant challenge in this market is the concern over antibiotic resistance and the need for responsible antibiotic usage. Regulatory restrictions and growing awareness about antibiotic stewardship pose challenges for manufacturers. Additionally, market competition and the cost of antibiotics in veterinary medicine require manufacturers to strike a balance between affordability and quality to ensure the continued availability and effectiveness of Tiamulin Hydrogen Fumarate for veterinary use.

Tiamulin hydrogen fumarate is a semisynthetic derivative of pleuromutilin. Tiamulin is active against gram-positive bacteria, mycoplasmas, and anaerobes, including *Brachyspira hyodysenteriae*. Tiamulin is well absorbed when administered PO. It is labeled for use as an oral medicated feed or water in swine in the US to treat swine dysentery and *Actinobacillus pleuropneumoniae*. In poultry, tiamulin interferes with monensin and salinomycin metabolism, and if the drugs are administered together, they become toxic. Generally, however, tiamulin has few adverse effects.

This report studies the global Tiamulin Hydrogen Fumarate for Veterinary production, demand, key manufacturers, and key regions.
