Abstracts

The global Tiamulin Premix market size is expected to reach \$ 138.6 million by 2029, rising at a market growth of 4.7% CAGR during the forecast period (2023-2029).

The Tiamulin Premix Market is driven by the demand for efficient livestock production and the need to prevent and treat respiratory and enteric diseases in animals. Tiamulin premixes are used as feed additives to promote animal health and growth. However, a significant challenge in this market is the increasing scrutiny of antibiotic use in animal agriculture due to concerns about antibiotic resistance. Regulatory restrictions and evolving guidelines pose challenges for manufacturers. Additionally, market competition and the cost considerations related to antibiotic alternatives require manufacturers to maintain a balance between affordability and product quality to meet the evolving needs of the livestock industry while addressing public health concerns.

Tiamulin hydrogen fumarate is a semisynthetic derivative of pleuromutilin. Tiamulin is active against gram-positive bacteria, mycoplasmas, and anaerobes, including *Brachyspira hyodysenteriae*. Tiamulin is well absorbed when administered PO. It is labeled for use as an oral medicated feed or water in swine in the US to treat swine dysentery and *Actinobacillus pleuropneumoniae*. In poultry, tiamulin interferes with monensin and salinomycin metabolism, and if the drugs are administered together, they become toxic. Generally, however, tiamulin has few adverse effects.

This report studies the global Tiamulin Premix production, demand, key manufacturers, and key regions.
