According to our (Global Info Research) latest study, the global Tile-in Shower Drain market size was valued at US\$ 1183 million in 2025 and is forecast to a readjusted size of US\$ 1994 million by 2032 with a CAGR of 7.7% during review period.

In 2025, global Tile-in Shower Drain production reached approximately 27.38 million units, with an average global market price of around US\$42 per unit.

The gross profit margin of major companies in the industry is between 25%–40%.

In 2025, the global production capacity of tile-in shower drains was approximately 36.51 million units.

Tile-in Shower Drains are concealed drainage systems designed to integrate seamlessly with floor tiles in bathrooms and shower areas. Unlike traditional exposed drains, tile-in drains allow the floor tile to be installed on top of the drain cover, creating a nearly invisible drainage outlet. These systems are widely used in modern residential bathrooms, hotels, and luxury building projects due to their aesthetic appearance and improved water drainage performance. Tile-in shower drains are typically made from stainless steel or corrosion-resistant materials and are designed to prevent water leakage and ensure efficient drainage.

The industrial chain includes upstream stainless steel sheets, polymer drainage components, sealing materials, and precision machining parts. Midstream manufacturing involves metal forming, welding, surface treatment, and assembly. Downstream users include residential construction projects, commercial buildings,

hotels, and interior renovation contractors. Supporting services include installation guidance, waterproofing solutions, and plumbing system integration.
