## Abstracts

The global Tilt Steering Motor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The tilt steering motor is usually located in the steering column and connected to the gear unit. When the motor is started, the gear unit can move the steering wheel up or down. The motor is controlled by a switch or button on the instrument panel or steering column, which sends a signal to the motor to adjust the position of the steering wheel. The tilt steering motor can be a DC (DC) or AC (AC) motor, depending on the specific application and design of the vehicle. It is designed to provide smooth and accurate movement of the steering wheel, allowing the driver to adjust the angle to the required position.
