The global Time Domain Reflectometer (TDR) for Cables market size is expected to reach \$ 197 million by 2032, rising at a market growth of 5.3% CAGR during the forecast period (2026-2032).

A Time Domain Reflectometer (TDR) for cables is a diagnostic test instrument used to detect, locate, and characterize faults in electrical cables and transmission lines. It operates by transmitting a fast electrical pulse into a cable and measuring the reflected signals caused by impedance changes along the line. These reflections allow the TDR to determine the distance to faults such as opens, shorts, splices, corrosion points, or crushed sections. TDR is widely applied in telecom networks, power distribution systems, data centers, aerospace wiring, and industrial cable maintenance, enabling non-destructive and highly accurate fault localization. In 2025, global Time Domain Reflectometer (TDR) for Cables production reached approximately 48.7 k units, with an average global market price of around US\$2600 per unit. The production capacity for Time Domain Reflectometer (TDR) for Cables in 2025 was approximately 50 k units. The typical gross profit margin for Time Domain Reflectometer (TDR) for Cables between 20% and 40%.
