The global Time of Flight Mass Spectrometer and Consumables market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

A Time-of-Flight Mass Spectrometer (TOF-MS) is an analytical instrument used to separate and identify ions based on their mass-to-charge ratio (m/z) using the principle of time-of-flight. In TOF-MS, ions are accelerated by an electric field, and their time of flight to a detector is measured. The time of flight is inversely proportional to the square root of the mass-to-charge ratio, allowing the determination of the mass of ions.
