According to our (Global Info Research) latest study, the global Tin-based Solder market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Tin-based solder is mainly composed of two elements of tin and lead, and a series of tin-lead solder alloys are formed by adding a small amount of other alloying elements. It has low melting point, low resistivity and good corrosion resistance. The wettability of tin-lead solder with a tin content of more than 50% is mainly used in electrical, electronic industries, tableware products, etc., and that with a tin content of less than 40% is mainly used in sheet metal, light bulbs, heat exchangers, car refrigerators, lead pipes etc. Brazing requires flux.
