Abstracts

The global Tin-based Solder market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Tin-based solder is mainly composed of two elements of tin and lead, and a series of tin-lead solder alloys are formed by adding a small amount of other alloying elements. It has low melting point, low resistivity and good corrosion resistance. The wettability of tin-lead solder with a tin content of more than 50% is mainly used in electrical, electronic industries, tableware products, etc., and that with a tin content of less than 40% is mainly used in sheet metal, light bulbs, heat exchangers, car refrigerators, lead pipes etc. Brazing requires flux.

This report studies the global Tin-based Solder production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Tin-based Solder, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
