Tin plating is the process of depositing a coating of solderable tin plating onto the surface of a material via an electrical current. Electroplating tin is an extremely cost-effective process. This is due to tin being so readily available and much less expensive than metals such as gold, platinum or palladium. Tin is a soft, ductile, silvery-white metal that is not easily oxidized in air. It has good conductivity and corrosion resistance while enhancing solderability of substrates that are not otherwise easily soldered to.
