Tin plated rolled copper foil is obtained by tin plating the rolled copper foil. Rolled copper foil is a product made by repeatedly rolling and annealing high-precision copper strips (or ingots) using the principle of plastic processing. Its thickness is usually between 4-100 microns, and its width is usually less than 800 millimeters. Tin plating treatment is to coat a layer of tin on the surface of rolled copper foil to improve its corrosion resistance, hardness, and welding performance. copper foil is tin-plated for EMI shielding applications. In addition to high shielding properties provided by copper, it also provides high reliability with superior corrosion resistance and solder wettability (connectivity).
