Tin selenide sputtering target is a high-purity functional material used for physical vapor deposition (PVD). It has the chemical formula SnSe and is a gray to black crystal or sintered block. The material is deposited into thin films through magnetron sputtering, thermal evaporation and other technologies, and is widely used in thermoelectric conversion devices, photovoltaic cells (such as perovskite solar cell buffer layer) and infrared detectors. Tin selenide thin films have excellent thermoelectric properties (ZT value > 2.5), narrow band gap (~ 1.3 eV) and environmentally friendly properties, and are one of the key materials for the next generation of green energy and flexible electronic devices.
