Tinned Copper Flat Braid is a flexible conductive component made of multiple fine copper wires braided into a flat configuration and surface-tinned, combining high conductivity, oxidation resistance, and mechanical flexibility. Its flattened structure offers increased contact area and heat dissipation, while the tin coating protects the copper core from corrosion and enhances solderability. Capable of withstanding repeated bending and vibration, it is ideal for dynamic electrical connections in power equipment grounding, battery pack interlinks, and rail transit current transmission. With high-temperature tolerance and low resistance, it serves as a premium solution for high-current applications in renewable energy and aerospace sectors, ensuring electrical safety while boosting system reliability.
