Abstracts

The global Tire Pressure Monitoring Sensor Battery market size is expected to reach \$ 307.8 million by 2029, rising at a market growth of 3.8% CAGR during the forecast period (2023-2029).

Growing regulations to mandate the installation of TPMS in developed regions such as North America, Europe and China act as a catalyst in the overall growth of TPMS battery market. Moreover, increase in the adoption of automotive safety systems is among key factors responsible for driving the TPMS market. This is expected to boost the demand for TPMS batteries over the forecast period. As mandatory European laws and regulations are implemented, Europe has surpassed the United States as the region with the largest demand worldwide, while China becomes the world's third largest TPMS battery after Europe and the United States by virtue of its enormous automobile market in 2019. According to the requirements of China's mandatory TPMS standard, for M1 auto models, all new certified vehicle must carry TPMS in the Chinese market by 2019 and all vehicles being produced must be compulsorily installed with TPMS in 2020, therefore China overtook Europe to be the world's largest TPMS market by 2020.

Tire Pressure Monitoring sensors are electronic devices installed in vehicle tires to monitor the tire pressure and alert the driver of any significant deviations. These sensors typically use batteries to power their operations.
