According to our (Global Info Research) latest study, the global Tire Pyrolysis Furnace market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Tire Pyrolysis Furnace is a device used to process waste tires. Through the pyrolysis process in a high-temperature environment, waste tires are converted into useful substances such as oil, gas, and residues. During the pyrolysis process, organic materials such as rubber and plastic in waste tires are decomposed and a mixture of gas and liquid oil is produced. These products can be used for industrial purposes or as an energy source. The Tire Pyrolysis Furnace helps reduce the emission problem of waste tires and at the same time enables the effective utilization and regeneration of waste resources.
