Tire Tire Solid Waste Resource Utilization Equipment refers to a complete industrial equipment system used for the reduction, harmlessness, and resource recovery of waste tires. It typically integrates multiple functional units such as crushing, sorting, pyrolysis/pyrolysis, regeneration, and exhaust gas purification, converting waste tires into products such as rubber powder, recycled rubber, pyrolysis oil, recyclable carbon black, and steel wire. This type of equipment is no longer limited to a single processing stage but covers the entire process of 'feeding?processing?recycling?environmental control' in a systems engineering approach. It is widely used in tire circular economy, solid waste resource recovery, and centralized disposal projects in industrial parks, serving as a key foundational equipment connecting environmental compliance and resource value recovery. In 2025, sales reached 37,000 units, with an average price of US\$46,000, total production capacity of 40,000 units, and a gross profit margin of 33%.
