## Abstracts

The global Tire X-ray Inspection Machine market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

A Tire X-ray Inspection Machine is a device used in the tire manufacturing industry to ensure the quality and safety of tires before they are released to the market. This machine uses X-ray technology to provide a non-destructive way to inspect the internal structure of a tire, which is not visible to the naked eye.

During the manufacturing process, tires can develop different types of structural inconsistencies or defects, such as improper steel belt placement, air pockets, misalignment of layers, or foreign objects embedded within the tire. These defects can affect the performance, reliability, and safety of the tire, potentially leading to failures on the road.

This report studies the global Tire X-ray Inspection Machine production, demand, key manufacturers, and key regions.
