## Abstracts

The global Tisotumab Vedotin market size is expected to reach \$ 1429 million by 2032, rising at a market growth of 16.7% CAGR during the forecast period (2026-2032).

Tisotumab vedotin is an antibody-drug conjugate (ADC) composed of a monoclonal antibody targeting tissue factor (TF) linked to a microtubule inhibitor payload. It exerts its anti-tumor effects by specifically binding to tissue factor expressed on the surface of tumor cells, followed by internalization into the cell and release of the cytotoxic agent. This process inhibits microtubule polymerization, blocks cell division, and induces tumor cell apoptosis. Tisotumab vedotin is primarily used for the treatment of recurrent or metastatic cervical cancer and other solid tumors. It has significant clinical value in the field of targeted cancer therapy and ADC-based oncology treatment. In 2025, global teprotumumab production reached approximately 700–900 kg

Tisotumab vedotin, as an antibody-drug conjugate (ADC) targeting tissue factor (TF), holds an important position in the treatment market for recurrent or metastatic cervical cancer. With the persistent global burden of cervical cancer and limited treatment options for advanced-stage patients, the demand for innovative second-line and later-line therapies continues to increase, driving the rapid expansion of the ADC drug market.

Tisotumab vedotin has been gradually incorporated into treatment guidelines in multiple countries and has achieved commercial uptake in North America and Europe, owing to its unique mechanism of action and demonstrated efficacy in clinical trials. From a competitive landscape perspective, the field is mainly challenged by immune checkpoint inhibitors and other investigational ADCs. However, its efficacy in specific patient populations provides a degree of differentiated competitive advantage.

Looking ahead, with potential expansion into additional tissue factor—highly expressing solid tumors, exploration of combination therapy strategies, and the overall growth of the ADC market, its market size is expected to continue expanding, maintaining strong development potential in the field of solid tumor targeted therapy.

This report studies the global Tisotumab Vedotin production, demand, key manufacturers, and key regions.
