Titanium anodes for copper foil manufacturing are titanium-based electrode materials designed specifically for the copper foil production process. These anodes utilize titanium's high corrosion resistance and good electrocatalytic activity to be used as insoluble anodes in the electrolysis process to produce high-quality copper foil. Titanium anodes are usually made by coating special electrocatalytic materials on a titanium substrate, which not only improves the stability and durability of the anode, but also optimizes the uniformity of copper deposition. In addition, their design and manufacture take into account the high current density and complex electrolyte conditions that may be encountered in copper foil production.
