Abstracts

According to our (Global Info Research) latest study, the global Titanium Boron Refiner market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Aluminum titanium boron (grain refiner) is a component of any aluminum casting used to improve and enhance the grain structure, uniformity, and properties of aluminum and its alloys. Crystallization of aluminum into coarse columnar, equiaxed, or dendritic grains is undesirable. Coarse particles tend to aggregate and lead to poor feed characteristics and lower tensile strength and wear resistance. The addition of aluminum, titanium, and boron can help overcome these problems by refining the grain structure of the metal with the help of titanium and boron.
