Abstracts

The global Titanium Boron Refiner market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Aluminum titanium boron (grain refiner) is a component of any aluminum casting used to improve and enhance the grain structure, uniformity, and properties of aluminum and its alloys. Crystallization of aluminum into coarse columnar, equiaxed, or dendritic grains is undesirable. Coarse particles tend to aggregate and lead to poor feed characteristics and lower tensile strength and wear resistance. The addition of aluminum, titanium, and boron can help overcome these problems by refining the grain structure of the metal with the help of titanium and boron.

This report studies the global Titanium Boron Refiner production, demand, key manufacturers, and key regions.
