The global Titanium Dioxide for Plastics market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Titanium dioxide (TiO₂) is one of the most important pigments. It is widely used because it efficiently scatters visible and absorbs UV light, thereby imparting whiteness, brightness, and opacity when incorporated into a plastic. Adding the titanium dioxide to plastics can improve the heat resistance, light resistance, and weather resistance of plastic products, protect plastic products from ultraviolet rays, and improve the mechanical and electrical properties of plastic products.

This report studies the global Titanium Dioxide for Plastics production, demand, key manufacturers, and key regions.
