## Abstracts

The global Titanium Dioxide Coated Micas market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Nano-scale titanium dioxide (T20Q) and aluminum powder mixed pigments or mica pearlescent pigments coated with nano-titanium dioxide are added to the coating, and the coating can produce mysterious and changing color-dependent effects, mainly because when incident light hits For titanium dioxide particles, due to the small particle size, the blue light will be strongly scattered. As a result, the green light and red light (yellow phase) that remove the blue light are reflected by the aluminum sheet and become regular reflection light, that is, the scattered light has a strong blue phase. Light, the reflected light is light with a strong yellow phase (gold), and different hues can be seen with different viewing angles.
