Abstracts

According to our (Global Info Research) latest study, the global Titanium Fiber Porous Sintered Felt market size was valued at US\$ 82.24 million in 2025 and is forecast to a readjusted size of US\$ 188 million by 2032 with a CAGR of 12.9% during review period.

In 2025, global production of titanium fiber porous sintered felt reached 462,000 square meters, with an estimated average selling price of \$173 per square meter. This material is a three-dimensional, interconnected porous metal product made from commercially pure or high-purity titanium micro-fibers. These fibers are produced via bundle drawing, melt extraction, or machining, and subsequently processed through non-woven web formation, calendering/shaping, and high-temperature vacuum sintering. Key characteristics include high porosity, uniform pore size distribution, excellent electrical and thermal conductivity, resistance to acidic media and high temperatures, as well as structural stability and compressive strength. Applications span PEM electrolyzers, proton exchange membrane (PEM) fuel cells and regenerative fuel cells, filtration of highly corrosive chemical liquids and gases, high-purity filtration for pharmaceuticals and semiconductors, electrode substrates for electrochemical reactors, filtration systems for seawater desalination and chlor-alkali processes, aerospace thermal management and filtration components, and porous support materials for medical implants and tissue engineering. The upstream supply chain primarily includes titanium sponge, titanium ingots, TA1 (Grade 1) or Grade 2 titanium wire and strip, high-purity titanium raw materials, vacuum sintering furnaces, calendering and cutting equipment, coating materials, and platinum (a precious metal). The midstream sector involves fiber preparation, web formation, calendering, vacuum sintering, pickling/cleaning, leveling, punching/cutting, and surface functionalization. The downstream sector connects to manufacturers of PEM electrolyzer stacks, hydrogen energy equipment, and fuel cells,

as well as companies specializing in chemical filtration equipment, electrochemical equipment, and high-end filtration system integration. Gross profit margins range from approximately 25% to 45%.
