According to our (Global Info Research) latest study, the global Titanium Skull Mesh market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

The skull titanium mesh is a mesh structure made of titanium alloy material, which is specially used for skull defect repair surgery. Titanium alloy has become an ideal choice in the field of skull repair due to its excellent biocompatibility, corrosion resistance and high mechanical strength. Through computer shaping technology, the skull titanium mesh can be precisely designed and manufactured according to the patient's skull defect to ensure that the repaired skull shape is similar to the normal skull. The skull titanium mesh is widely used in skull defect repair surgery. During the operation, the doctor will select a suitable skull titanium mesh according to the patient's skull defect and fix it to the defect site through surgery. After the operation, the skull titanium mesh will be integrated with the patient's skull to support and protect the brain tissue.
