Abstracts

According to our (Global Info Research) latest study, the global TLC NAND Flash Memory market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes. TLC flash (triple-level cell flash) is a type of NAND flash memory that stores three bits of data per cell. TLC is also known as MLC-3, 3-bit MLC and X3. Two of the main advantages of TLC NAND flash over SLC and MLC are storage density and cost per bit. Because TLC flash stores more bits per cell, it can triple the capacity of SLC and offer 1.5 times more storage than two-bits-per-cell MLC. NAND manufacturers achieve the same capacity with a TLC die than they do with a 32 Gb MLC die by reducing the die size from 16 billion cells to 10.667 billion cells, enabling cost savings.
