Abstracts

According to our (Global Info Research) latest study, the global TMAH for FPD market size was valued at US$ 188 million in 2025 and is forecast to a readjusted size of US$ 244 million by 2032 with a CAGR of 3.9% during review period.

TMAH can be divided into solutions and crystals. This article mainly counts the types of TMAH solutions. TMAH is highly alkaline and can quickly absorb carbon dioxide in the air to form carbonates. It is an organic strong base with strong corrosiveness.

TMAH solutions are mainly industrial grade and electronic grade. Although the price difference between the two is not large, the fundamental difference lies in the different impurity content. Conventional TMAH can only be used in low-end markets such as organosilicon catalysts; while high-end markets, such as semiconductors, require higher-level TMAH solutions, and the impurity content and product performance meet the semiconductor grade requirements. TMAH itself can be directly used as a developer in the Display and semiconductor industries.

Downstream customers usually choose TMAH solutions of different contents according to specific application scenarios. 25% TMAH is generally used in the electronics field. Global TMAH solution companies are mainly distributed in Japan, China (including Taiwan), and South Korea.

Global core companies include Greenda Chemical, Hantok Chemical, SACHEM, Tama Chemicals, Tokuyama, Tokyo Ohka Kogyo, Chang Chun Group, ENF Technology, Sunheat Chemical, Zhenjiang Runjing Technology and San Fu Chemical, among which the top 5 have a market share of more than 50%. The global electronic-grade TMAH market is highly competitive, and the electronic-grade TMAH market share is mainly
