## Abstracts

According to our (Global Info Research) latest study, the global TMR Magnetic Sensors market size was valued at USD 349.7 million in 2022 and is forecast to a readjusted size of USD 710.3 million by 2029 with a CAGR of 10.7% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A TMR sensor IC integrates a TMR sensor element and a signal processing circuit. A TMR sensor element is a magnetic sensor element using the Tunnel Magneto-Resistance effect (TMR effect). The TMR effect at room temperature was discovered by Professor Terunobu Miyazaki at Tohoku University in 1995. Unlike conventional Hall or AMR sensor elements, a TMR sensor element is a new magnetic sensor technology that is less susceptible to temperature changes, has extremely high magnetic sensitivity and high resistance.

The high magnetic sensitivity and high resistance of TMR sensor elements have made it possible to manufacture magnetic sensor ICs with low power consumption and high accuracy.

The TMR sensor IC will find application in a wide range of devices from consumer products with limited power supply capacity to industrial and automotive equipment that demand high-accuracy control.
