The global TMT Bars market size is expected to reach \$ 20350 million by 2029, rising at a market growth of 8.3% CAGR during the forecast period (2023-2029).

TMT steel bars or Thermo-Mechanically Treated steel bars are high-strength reinforcement bars having a tough outer core and a soft inner core. The manufacturing process involves passing the steel wires through a rolling mill stand and passed through the Tempcore water cooling system. This delivers greater tensile strength to the TMT bars. The most important features of TMT steel bar include higher elongation. This improves the bend/re-bend properties of the TMT steel bars, thus making it safe from natural calamities such as an earthquake. These TMT steel bars are generally used material in construction for enhanced protection against earthquake and another type of natural disaster.
