## Abstracts

This report studies the Tongue Depressors market. A tongue depressor is a tool used in medical practice to depress the tongue to allow for examination of the mouth and throat. The most common modern tongue depressors are flat, thin, wooden blades, smoothed and rounded at both ends, but, historically, tongue depressors have been made of a variety of materials. Since they are inexpensive and difficult to clean, wooden tongue depressors are labeled for disposal after a single use.

### Scope of the Report:

This report focuses on the Tongue Depressors in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

China has the largest global export quantity and manufacturers in tongue depressors market, while the USA is the second sales volume market for tongue depressors in 2016.

Tongue depressors technology is very mature now, and new enterprises can not surpass existing famous brands on reputation or design in the short term. So, the study group recommends the new entrants need to be considered carefully before enter into this field.

The worldwide market for Tongue Depressors is expected to grow at a CAGR of roughly 2.5% over the next five years, will reach 330 million US\$ in 2023, from 280 million US\$ in 2017, according to a new GIR (Global Info Research) study.
