Most of the cnc machines have no built-in tool measurement mechanism, So to measure cnc machine tools external tool measuring devices are used. These tool measuring devices are called Tool Presetters or Tool. A cnc tool presetter is a highly accurate device which is used to measure the cnc machine tools. A tool presetter makes the cnc machinist life very easy, now he just have to tighten the tool in tool holder, and after this he takes the tool measurements from the tool presetter and just put them straight in cnc machine tool geometry. Nowadays very versatile cnc tool presetters are available in the market. For a cnc machine workshop a highly accurate tool presetter is a must have and worth investment.
