The composite tools are made either from glass fiber or carbon fiber mixed with a suitable matrix (resin) such as epoxy, BMI, and others. The composite tools provide lightweight, dimensionally accurate, and affordable tooling.

SCOPE OF THE REPORT:

This report focuses on the Tooling Composites in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Carbon fibers has the highest share in the composite tooling market due to their lightweight and high strength. These properties make them a suitable tooling material for various applications in the aerospace & defense industry.

There is a mass usage of composites in the aerospace industry, with 50% of composites being used in construction of some commercial aircrafts. The use of composites has continuously increased in the composite tooling due to their lightweight, dimensionally stability, and high strength. Due to the increasing use of composites in the aerospace industry, the demand for superior composite tooling is all set to rise.

Composite tooling helps in having tool design freedom and high flexibility.

The Americas accounted for the highest revenue share during 2017. The increasing demand for the use of composites in the aerospace, automotive, wind energy, military, and marine industries in the region led to the growth of the tooling composites market.

The vendors in the market are expanding their business through strategic alliances and new product offerings with OEMs of automotive and aircraft manufacturers.
