The global Tooth-Shaped Composite Gasket market size is expected to reach \$ 972 million by 2032, rising at a market growth of 4.8% CAGR during the forecast period (2026-2032).

In 2025, global Tooth-Shaped Composite Gasket production reached approximately 151.11 million units, with an average global market price of around US\$4.50 per unit.

The gross profit margin of major companies in the industry is between 22%-38%.

In 2025, the global production capacity of Tooth-Shaped Composite Gasket was approximately 201.48 million units.

Tooth-Shaped Composite Gasket is a sealing component with serrated or toothed metal structure combined with graphite, PTFE, rubber, or other sealing layers. It is designed to improve compression recovery, pressure resistance, leakage control, and flange sealing reliability under high temperature, vibration, or corrosive working conditions.

The industrial chain of Tooth-Shaped Composite Gasket covers upstream materials such as stainless steel, carbon steel, graphite sheets, PTFE, rubber compounds, adhesives, surface coatings, and precision cutting tools. The midstream consists of material lamination, stamping, tooth forming, surface treatment, die cutting, inspection, and packaging. Downstream applications mainly include chemical equipment, pipelines, valves, pumps, heat exchangers, power plants, marine equipment, and industrial maintenance markets.

Industrial parts surface strengthening and mechanical performance upgrading drive the

technical iteration of fully automatic induction hardening systems. The equipment realizes fast and uniform heat treatment to improve workpiece hardness and wear resistance. Automated production linkage and precise temperature control greatly improve processing consistency.

This report studies the global Tooth-Shaped Composite Gasket production, demand, key manufacturers, and key regions.
