Abstracts

The global Toothed Liquid Fertilizer Spreader market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The toothed liquid fertilizer spreader is a kind of mechanical equipment used in agricultural production, which can evenly spread liquid fertilizer in the farmland. It adopts a gear-type conveying device, which drives the drum to rotate through the gear, pumps the fertilizer out of the liquid storage tank, and distributes it evenly to the gear through the distributor. The rack on the gear squeezes the fertilizer out of the drum to form fine granules, which are then evenly spread over the field.

The toothed liquid fertilizer spreader has the advantages of high precision, uniform spreading, and high efficiency, and can meet the needs of different crops and different terrains. At the same time, it can also adjust the spreading amount and spreading range according to the needs of different crops, so as to achieve the best fertilization effect. The toothed liquid fertilizer spreader has been widely used in modern agricultural production.
