According to our (Global Info Research) latest study, the global TOPCon Silver Paste market size was valued at US\$ 4976 million in 2025 and is forecast to a readjusted size of US\$ 6425 million by 2032 with a CAGR of 3.7% during review period.

TOPCon silver paste is a screen-printable thick-film conductive paste used to form the front and/or rear metallization of TOPCon (Tunnel Oxide Passivated Contact) crystalline-silicon solar cells. It is engineered to deliver low contact resistivity to TOPCon's doped surfaces while minimizing metallization-induced recombination and preserving the passivation stack.

Upstream, TOPCon silver paste is typically formulated from silver powder + glass frit + organic vehicle (binders/solvents) + functional additives, where the glass frit chemistry and additive package are tuned to the target surface (TOPCon emitter/passivated contact) and firing/laser-assist conditions.

Downstream, it is used mainly in screen printing ? drying ? firing (co-firing) metallization flows that are widely adopted for industrial TOPCon; advanced variants include laser-assisted contact optimization (LECO) using specialized pastes to reduce recombination and widen process windows.

In 2025, global sales of TOPCon silver paste reached approximately 4,909 tons, with an average global market price of around US\$ 985/kg. Production capacity varies significantly among manufacturers, with gross profit margins ranging from approximately 5% to 20%.
