Abstracts

The global Topical Skin Adhesive market size is expected to reach \$ 1342 million by 2032, rising at a market growth of 7.6% CAGR during the forecast period (2026-2032).

Topical skin adhesive is used to close wounds in the skin, as an alternative to sutures, staples or clips. Topical skin adhesive produces less scarring and is less prone to infection than sutured or stapled closure.

The key drivers of the topical skin adhesive market is the increasing trend toward minimally invasive procedures. Patients and healthcare providers are seeking alternatives to traditional sutures and staples, which can cause discomfort and scarring. Topical skin adhesives offer faster application, reduced infection risk, and improved cosmetic outcomes, making them an attractive option in surgical, emergency, and outpatient settings. Additionally, advances in adhesive technology have led to the development of more durable and flexible products that further enhance their clinical use.

A major challenge in the topical skin adhesive market is the potential for product failure in high-tension areas or on patients with compromised skin, such as those with diabetes or thin skin. In such cases, adhesives may not provide sufficient strength to hold the wound closed, necessitating alternative closure methods. Furthermore, the initial cost of these products remains higher than traditional options like sutures or staples, which can be a barrier for adoption in cost-sensitive healthcare environments, especially in developing regions.

The global topical skin adhesives market is dominated by J&J (Ethicon), Medtronic, Advanced Medical Solutions, Medline, B. Braun (Aesculap), Chemence Medical, and

Adhezion Biomedical, with the top seven players accounting for about 80% of the market share. Of these, J&J (Ethicon) has about 45% of the market share. North America is the largest market for topical skin adhesives with about 50 percent market share, followed by Europe with about 30 percent.
