Abstracts

According to our (Global Info Research) latest study, the global Toripalimab market size was valued at US\$ 329 million in 2025 and is forecast to a readjusted size of US\$ 896 million by 2032 with a CAGR of 13.4% during review period.

Toripalimab is a humanized IgG4 monoclonal antibody and a programmed cell death protein-1 (PD-1) immune checkpoint inhibitor. It works by binding to the PD-1 receptor on T cells, thereby blocking its interaction with PD-L1 and PD-L2. This mechanism relieves tumor-induced immunosuppression and restores and enhances the body's anti-tumor immune response. Toripalimab is primarily used in the immunotherapy of various malignancies, such as melanoma, non-small cell lung cancer (NSCLC), and nasopharyngeal carcinoma. It has significant clinical value in the field of cancer immunotherapy. In 2025, global production of toripalimab reached approximately 1.2 million vials.

Toripalimab, as one of the first domestically developed and successfully internationalized PD-1 immune checkpoint inhibitors in China, holds an important position in the cancer immunotherapy market. With the continuous rise in global cancer incidence and the expanding clinical application of immunotherapy across multiple solid tumors, the PD-1 inhibitor market is maintaining rapid growth. Toripalimab has achieved relatively high market penetration in China, supported by a broad range of approved indications, the advancement of reimbursement coverage, and strong clinical performance in tumor types such as nasopharyngeal carcinoma. It is also gradually expanding into overseas markets, including Europe and the United States. From a competitive landscape perspective, the market is dominated by global blockbuster products such as pembrolizumab and nivolumab. However, domestic products demonstrate certain competitive advantages driven by pricing benefits and policy

support. Looking ahead, with the approval of additional indications and the expansion of international commercialization, the market size of toripalimab is expected to continue growing, strengthening its position in the global PD-1 inhibitor landscape.
