Abstracts

According to our (Global Info Research) latest study, the global Toroidal Core Electrical Transformer market size was valued at US\$ 756 million in 2025 and is forecast to a readjusted size of US\$ 1100 million by 2032 with a CAGR of 5.6% during review period.

In 2024, global shipments of toroidal core electrical transformers were approximately 14.8 million units, with an average price of approximately USD 47 per unit and an average gross profit margin of approximately 22%?28%. A toroidal core electrical transformer is an electrical transformer device that uses a toroidal silicon steel strip or iron powder core as the magnetic flux closure core, with uniformly distributed windings, a compact structure, extremely low leakage flux, high efficiency, and a significantly smaller size and weight than traditional EI transformers. Typical parameters cover a power range of 50 VA?2000 VA, input voltage of 110 V/220 V, output voltage of 5 V?48 V (rectified to DC or AC output), operating frequency of 50/60 Hz, efficiency of 85%?95%, extremely low no-load current (less than 0.5% of full load), windings using ?99.9% pure copper wire, insulation class B or F, and temperature rise controlled within ?40 K. Its structure is lightweight, heat dissipation is excellent, noise and vibration are extremely low, and it has excellent suppression of electromagnetic interference (EMI). Its upstream raw materials include high-purity copper wire, silicon steel strip or iron powder core, insulating paper/polyester film, epoxy resin or plastic encapsulation materials, and terminal and housing metal parts; downstream applications are mainly in switching power supply manufacturers, industrial control power supplies, audio equipment manufacturers, medical equipment, and laboratory instruments. For example, Amgis, one of the major suppliers, has an annual production capacity of approximately 1 million toroidal transformers.

Over the next 5-10 years, the toroidal core electrical transformer market will maintain steady growth, primarily driven by the following trends: First, the consumer electronics, communication base stations, electric vehicle charging stations, and medical equipment sectors demand high efficiency, lightweight, low leakage flux, low noise, and compact size for power modules, giving toroidal transformers an advantage over traditional EI models. Second, as global energy conservation and electromagnetic compatibility (EMC) standards become increasingly stringent, demand is shifting towards power solutions with low leakage flux, high efficiency, good heat dissipation, and high stability. Third, requirements for green and sustainable materials and packaging are driving upgrades in insulation materials and packaging processes, increasing the unit price and added value of toroidal transformers, thereby prompting manufacturers to expand production scale and optimize supply chain management. Finally, the demand for equipment repair and replacement in mature markets, along with the simultaneous expansion of power infrastructure and industrial automation upgrades in developing countries, will jointly drive the growth of the entire toroidal transformer market.
