## Abstracts

The global *Torreyia Nucifera* Seed Oil market size is expected to reach \$ 17.73 million by 2032, rising at a market growth of 5.3% CAGR during the forecast period (2026-2032).

*Torreyia grandis* seed oil is a precious plant oil extracted from the kernels of the *Torreyia grandis* tree, a member of the Taxaceae family. It is rich in approximately 90% unsaturated fatty acids (such as oleic acid, linoleic acid, and pinolenic acid) and various active ingredients. It possesses high nutritional value, antioxidant properties, and moisturizing effects on the skin, and is often used as a high-end edible oil, functional food ingredient, and cosmetic raw material.

The upstream industry is based on *Torreyia grandis* cultivation, while midstream companies process the *Torreyia grandis* kernels into seed oil through physical pressing processes such as shelling, steaming, and pressing. This process has a low yield; approximately 4,000 jin (about 2,000 catties) of *Torreyia grandis* yields about 600 jin (about 300 catties) of oil.

In 2024, global sales were approximately 104 tons, with an average market price of approximately US\$116 per kilogram. The industry's gross profit margin is in the range of 10%–25%.
