Abstracts

According to our (Global Info Research) latest study, the global Torsion Resistant Cables market size was valued at US\$ 395 million in 2024 and is forecast to a readjusted size of USD 534 million by 2031 with a CAGR of 4.4% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Torsion resistant cables are control cables specifically designed to withstand torsional applications and rotational motion for extended periods of time. This cable is usually composed of conductor, insulation layer and torsion-resistant jacket layer, suitable for those applications that need to maintain signal or power transmission in complex environments without interference. One of the key characteristics of these cables is their resistance to torsion, which means they maintain electrical performance and mechanical integrity through repeated twisting actions.

Market Concentration and Key Players:

From an international perspective, the market concentration of anti-torsion cables is relatively high, such as large European and American manufacturers, such as Lapp, Kromberg & Schubert and SAB Br?ckskes; from a domestic perspective, the production of anti-torsion cables is relatively small, such as Jiangsu Shangdian Cable, Tianjin Feiya and other small and medium-sized enterprises.

Manufacturing Processes and Market Trends:

The manufacturing process of torsion-resistant cables is critical to ensuring their performance. In the production process, it is necessary to strictly control the key processes such as conductor stranding, insulation extrusion, sheath extrusion, etc. to ensure that the cable can withstand repeated torsion and bending without damage. These cables are usually made of high-quality materials such as high-purity copper as conductor, polyvinyl chloride (PVC), ethylene propylene rubber (EPR) or crosslinked polyethylene (XLPE) as insulation, and abrasion and oil resistant polyurethane (PUR) or thermoplastic polyurethane elastomer (TPU) as sheath material.

In terms of market trends, with the rapid development of industrial automation, robotics and renewable energy sources such as wind power, the demand for anti-twist cables is increasing. In China in particular, the sector is expected to continue to benefit from the expansion of the NEV and wind power sectors. In addition, in the next few years, the global and China torsion-resistant cable markets will experience significant growth, mainly due to technological progress and growth in demand for high-performance cables, and with the advancement of the 14th Five-Year Plan, there will be more development opportunities in the industry.
