According to our latest research, the global Total Body Irradiation Therapy Solution market size will reach USD 1415 million in 2031, growing at a CAGR of 9.2% over the analysis period.

Total Body Irradiation Therapy Solution is a special radiotherapy technology that uses radioactive rays to irradiate the whole body. It is mainly used for pretreatment of blood system diseases such as leukemia, lymphoma, severe aplastic anemia, etc. before hematopoietic stem cell transplantation. It irradiates the whole body with high-energy rays (such as cobalt-60 gamma rays or high-energy X-rays) to kill remaining malignant tumor cells in the body, inhibit the body's immune response, and empty the bone marrow space for transplanted bone marrow cells, thereby improving the success rate of transplantation.
