## Abstracts

Technological advancements in implant materials used for knee replacement surgery will result in increasing demand for the same. Companies such as ConforMIS provides customized 3D printed implants to exactly match the patient's anatomy. Materials such as kneecap, inserts and jigs are also customized to lessen surgery time and deliver better outcomes. Technological shift from traditional invasive surgery towards minimal invasive surgeries will favour market growth over the projection years.

The industry growth is most likely to be hampered in emerging economies having relatively low-income levels due to high costs associated with the total knee replacement procedures. Utilization of advanced technology within the devices have increased the cost of total knee replacement procedures, resulting in hindering the market growth.
