Abstracts

The global Total Phosphorus Online Monitor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The total phosphorus analyzer is suitable for the detection of surface water, groundwater, industrial wastewater, domestic wastewater and other water quality. Digest the sample with potassium persulfate (or potassium nitrate-perchloric acid) under neutral conditions. All the phosphorus contained is oxidized to orthophosphate. In an acidic medium, orthophosphate reacts with ammonium molybdate to generate phosphomolybdate heteropolyacid in the presence of antimony salt, which is immediately reduced by ascorbic acid to form a blue complex.

This report studies the global Total Phosphorus Online Monitor production, demand, key manufacturers, and key regions.
