According to our (Global Info Research) latest study, the global Touch and Display Driver IC market size was valued at US\$ 3074 million in 2025 and is forecast to a readjusted size of US\$ 4428 million by 2032 with a CAGR of 5.4% during review period.

TDDI (Touch and Display Driver Integration) chip is an advanced technology that integrates touch controller and display driver into a single chip, which is widely used in smartphones, tablets and other mobile devices. This integrated design not only simplifies the manufacturing process and reduces the number of components, but also reduces the overall power consumption and improves the reliability and performance of the system. TDDI chip can process touch input and screen display output at the same time, making the device more responsive and the user experience smoother. The core advantage of TDDI technology lies in its high degree of integration. Traditional touch screens require separate touch IC and display driver IC, while TDDI chip eliminates the communication delay between the two through internal signal processing optimization, achieving faster and more accurate touch response.
